Program - Climate Dynamics (PhD)

Program - Climate Dynamics (PhD): Assessment Report

Program General Information

Program General Information

Mission Statement

The mission of the Ph.D. Program in Climate Dynamics is to help train the next generation of researchers in the science of climate dynamics. Students in the program will learn the elements of the climate, including atmosphere, ocean, and land dynamics, and how these elements interact with each other. Students will also learn to use computational methods necessary for climate modelling. Graduates of the program will have developed critical, analytical, and imaginative thinking in order to better understand the Earth's climate and climate variability, which pose some of the most critical and complex issues facing society.

College/School

College of Science
